

Dr. Purdy Appointed to the Theriogenology Foundation Board

Steve Purdy, President of Nunoa Project and Director of the North American Camelid Studies Program, has just begun his tenure on the Theriogenology Foundation Board of Directors and Global Outreach Task Force Committee. Steve was recruited by the foundation as result of his past teaching and research work with alpacas and ongoing work with alpaca farmers in Peru. The Theriogenology Foundation is a global non-profit which believes that the preservation and reproduction of animals is essential to human welfare. By engaging specialists in animal reproductive health and productivity, the Theriogenology Foundation formulates and implements solutions to combat human and animal diseases which threaten food security and the social and economic health of the world's population. Steve also is the author of the Animal Health Initiatives section for alpacas and llamas on the website. He is looking forward to working with the Foundation on global improvements in animal production through improved reproduction management.

Mission statement: The Theriogenology Foundation secures and allocates resources dedicated to advancing the science and practice of animal reproductive medicine.
